

QmotionTM
EMEA

Motorised blinds entirely wireless, remote control, virtually silent

QMotion Blinds go beyond industry standards to reach new heights in innovation. We are the only blind with built in patented counterbalance motor technology.

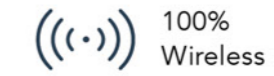

The only automated window treatment company offering a manual override feature - giving you full control by hand, remote, smart device and voice.

QMotion Blinds can offer fully integrated window treatment solutions for almost every known home automation system and can also be controlled directly from Amazon® Echo Plus without the need for a bridge.

Our motorised systems feature slim and unobtrusive brackets reducing side light gaps to 13mm on each side - the narrowest in the industry.

QMotion is a wholly owned brand of Legrand, a multi € billion revenue worldwide company who specialise in electrical and digital building infrastructure products.

QMotion motors and controls are backed by a Limited Lifetime 20 year Warranty.

Engineered to be seen, not heard

QMotion continue to innovate and enhance their product portfolio with low noise quality engineered products. The product portfolio is further enhanced with the launch of new products such as the Revolve Drapery Rod System and a battery powered Roman Blind system that can handle large windows with heavy fabrics.

Curtain tracks are also available enhancing our range of the most innovative and quiet wire free motorised shading solutions. All that remains is for you to choose the fabric and style of the QMotion product that suits your needs and requirements.

ROLLER

Quiet motorized Roller Blind

QMotion specialise in providing unique and innovative window covering solutions for all applications. The company specialises in wire free window treatment with all the benefits of a wired solution but without the need for a qualified electrician to install 240v wiring.

The Roller Blind has a unique patented manual override feature whereby the user can raise and lower the blinds by hand without disturbing any of the components and if controlled by a third party system it will provide full positional feedback.

To further enhance the range of options available to you QMotion Blinds can be wired for control and power using a single Cat6 cable making it an effective and affordable wired shading system.

CUTRAC DRAPERY

Ultra quiet Drapery Track

The ultra quiet CuTrac Drapery Track is available as a wire free battery powered or via a Cat6/RS485 wired solution. ZigBee or RS485 controls allows for integration into nearly all home control platforms, as well as voice control through Amazon Alexa or Google Home.

Both pinch pleat and wave headings are available giving you all the options that your Interior Designer or supplier needs to supply and hang your favourite fabrics.

ROMAN

Quiet Roman blind

Now for the first time the user has the ability to install a fully functional quiet Roman blind that provides a wire free battery powered system, operated via remote control, their smart phone or tablet using an app. In addition, the Roman blind is available as a low voltage wired version.

All that is required is for you to select a fabric from your Interior Designer or supplier and supply it to QMotion as a made-up cover for us to mount and calibrate on to the QMotion Roman hardware system.

TPro-30 DRAPERY

Motorised curtain track

The TPro-30 Motorised curtain track system, with its quiet motor, is ideal for residential or commercial environments. Our luxury curtain track comes with the ability to manually override the track at anytime and is available for openings up to 12m in length.

TPro-30 provides an affordable solution where only 240v wiring is available to power the track. Both pinch pleat and wave headings are available, giving you all the options that your Interior Designer or supplier needs to supply and hang your favourite fabrics.

REVOLVE DRAPERY

Revolving motorised drapery

To make the home more modern and convenient, QMotion has the only revolving motorised drapery system on the market. The versatile rod is compatible with traditional pinch pleat or wave drapery styles.

Uniform wave can be created using the Revolve rod and a flat panel for flexible spacing. Available in a variety of finishes, power and remote control options, manual or motorized, for single or dual applications.

BLIND POCKET

Hidden Roller Blinds

QMotion are able to supply a premium extruded aluminium Blind Pocket that can be installed at the head of the window to create a unique contemporary solution to hide your Roller Blinds.

Pockets come in RAL 9016 white colour as standard but can be custom coloured to match any décor. Particularly suitable to extensions and new build projects.
